

PlantProcess IQ -- Editions and Licensing

Document class	Commercial Reference
Audience	Executive sponsor, procurement
Product	PlantProcess IQ (PPIQ) -- SOU Industrial Software
Version	1.0 -- June 2026

PlantProcess IQ is licensed by edition. Feature availability is governed by a signed entitlement resolved by a single backend authority that both the interface and the API consult, so a capability that an edition does not include is shown disabled and cannot be reached by calling the API directly.

Editions

Edition	Intended for	Included capability
Light	A first connected plant and core investigation	Source integration, staging, canonical mapping and genealogy, dashboards and KPIs, on-demand correlation analysis
Pro	A plant operating the product daily	Everything in Light, plus scheduled learning jobs, the value engine, widget customization with the script layer, and the jobs monitor
ProPlus	An advanced plant team	Everything in Pro, plus advanced widget authoring, expanded analytical methods, and extended role scoping
Enterprise	A multi-plant or fleet operator	Everything in ProPlus, plus multi-plant scope, dedicated or on-premise deployment options, and enterprise administration

The capability split above is indicative. The precise feature matrix per edition is confirmed in a proposal.

Commercial model

PlantProcess IQ is offered as an annual subscription per plant, with fleet and enterprise agreements for multiple plants.

Item	Value
Per-plant annual subscription (indicative range)	[[PER_PLANT_ACV_RANGE]]
Fleet / enterprise (multiple plants, indicative range)	[[FLEET_ACV_RANGE]]
Deployment options	SaaS, dedicated, on-premise, air-gapped
Edition	Light / Pro / ProPlus / Enterprise

A formal quotation is issued per opportunity based on plant count, source count, data volume, retention horizon, and deployment model.

What is included

A subscription includes the platform, product updates within the licensed edition, and standard support. Onboarding assistance, historical backfill support, and any dedicated or on-premise deployment are scoped per agreement. Support terms and data-handling commitments are provided as part of a proposal.
