

PlantProcess IQ -- Pilot Offer

Document class	Commercial Proposal -- Pilot
Audience	Executive sponsor, procurement
Product	PlantProcess IQ (PPIQ) -- SOU Industrial Software
Version	1.0 -- June 2026
Prepared for	[[CUSTOMER_NAME]]
Date	[[PROPOSAL_DATE]]

Purpose

This pilot is a time-boxed, low-risk engagement that proves PlantProcess IQ against your own plant data, on your own quality question, before any broader commitment. It is read-only throughout; nothing in your source or control systems is written to or changed.

Scope

Item	Detail
Sources connected	[[SOURCE_LIST -- e.g. Level 2 tracking, surface-inspection, historian, laboratory]]
Investigation focus	[[TARGET_QUESTION -- e.g. a named surface-defect family on a named product line]]
Data horizon	[[HISTORY_WINDOW -- e.g. backfill of N months of history]]
Deployment	[[DEPLOYMENT_MODEL -- SaaS / dedicated / on-premise]]
Duration	[[PILOT_DURATION -- e.g. 8 to 12 weeks]]

What the pilot delivers

- The connected sources mapped into one canonical genealogy on your own key names.
- A working investigation of the target question, with each finding showing its population, method, and exclusions.
- Dashboards and KPIs for the chosen area.
- A bounded value estimate for the target question, with every input drillable to its source.

Success criteria

The pilot is considered successful when [[SUCCESS_CRITERIA -- e.g. the genealogy is walked end to end on the customer's keys, a defect investigation reproduces a known finding, and a value estimate is produced for the target question]]. These criteria are agreed in writing before the pilot begins.

Commercials and conversion

Item	Value
Pilot fee	[[PILOT_FEE -- e.g. 30,000 to 40,000 EUR]]
Pilot term	[[PILOT_DURATION]]
Conversion	On a successful pilot, the pilot fee is credited toward a first-year subscription of [[CONVERSION_TARGET -- e.g. up to 120,000 EUR]] for the connected plant, under the edition agreed in the proposal

Why the risk is low

The engagement is read-only and bounded by source-load protection, so it cannot disturb production systems. It is time-boxed with written success criteria. The pilot fee is credited on conversion. And the product is honest by design: where data does not yet support a finding, it reports readiness rather than a fabricated result, so what you see at the end of the pilot is what the product genuinely establishes.
